Other information

Fees charged to the Fund

In case the Fund invests in the investment units of other funds under the management of the Management Company (Destination Fund), the Management Company will not double charge the management fee of the Destination Fund. For example:

The Initial Fund NAV of Baht 1,000 million and charges the management fee at 1.00% of the Initial Funds' NAV. It allocates investments to the Destination A Fund in the amount of Baht 100 million which charges the management fee at the rate of 0.70% of the Destination A Fund's NAV. Moreover, the Initial Fund also allocates investments to Destination B Fund in the amount of Baht 100 million which charges the management fee at the rate of 1.80% of the Destination B Fund's NAV. The remaining money that the Initial Fund received from raising funds from investors, the Management Company will invest in other types of asset within the scope of the investment policy.

The Management Company's methods for calculating management fee based on the NAV of the Initial Fund are as follows:

1. On the part of investment in the Destination A Fund in the amount of Baht 100 million, the Management Company will charge the management fee at the rate of 0.30% of the amount of Baht 100 million (0.30% is calculated from the difference between the management fee charged by the Initial Fund [1.00%] and the management fee of the Destination A Fund [0.70%]).
2. On the part of investments in the Destination B Fund in the amount of Baht 100 million, the Management Company will rebate the management fee at the rate of 0.80% of the amount of Baht 100 million (0.80% is calculated from the difference between the management fee charged by the Initial Fund [1.00%] and the management fee of the Destination B Fund [1.80%]).
3. For investments in other types of asset in the amount of Baht 800 million, the Management Company will charge to the Initial Fund at the rate of 1.00% of the sum of Baht 800 million.

Fees Charged to the Unitholders

1. At the rate not more than the percentage of the value of the Investment Units and the Management Company may charge the Front-end Fee and the Back-end Fee to each group of investors differently as follows:

1.1) The Management Company will waive the Front-end Fee and the Back-end Fee for provident funds and/or private funds and/or funds under the management of the Management Company.

1.2) For customers who do not fall in the category of No. 1.1, the Management Company will charge the Front-end Fee and the Back-end Fee at the rate of 100% of the actual Front-end Fee and the Back-end Fee.

2. If the Fund (Initial Fund) invests in the investment units of a fund under the same management (Destination Fund), it will not double charge the Front-end Fee of the Destination Fund. For example, if the Initial Fund's NAV is Baht 1,000 million and it allocates investments to the Destination Fund in the amount of Baht 100 million, the Management Company will charge the Front-end Fee/Back-end fee from the Baht 1,000 million at the rate specified by the Initial Fund only. The Destination Fund will not double charge the Front-end Fee/Back-end fee from the Initial Fund.

GLOSSARY

Maximum Drawdown: the fund's largest percentage loss over the past 5 years (or since inception if the fund has been operating for less than 5 years) measured from peak NAV/unit to lowest NAV/unit during a decline. The Maximum Drawdown helps provide some indication of the risk of potential loss when investing in the fund.

Recovery Period: the time it takes to regain losses; this data provides information about how long it took to climb back from the largest loss to a former peak.

Portfolio Turnover Ratio: illustrates how active the portfolio is traded during a particular period. This is calculated by dividing the value of total purchases in 1 year or the value of total sales in 1 year, whichever is lower, by the fund's average NAV over the same period being measured. A fund with a high Portfolio Turnover ratio denotes that its portfolio managers actively trades the securities in the portfolio; this incurs considerable trading costs which should be taken into consideration in comparison with the performance of fund to ascertain whether the active trading activity is well justified.

Sharpe Ratio: the ratio between excess return achieved by the fund compared to investment risks taken. It is determined from the difference between the fund's return and the Risk-Free Rate, compared to the fund's volatility (Standard Deviation). The Sharpe Ratio reflects the excess return the fund generates given its risk exposure. A fund with a higher Sharpe Ratio denotes a better-managed fund since it is able to generate a higher return over a similar risk exposure.

Alpha: excess return generated by the fund when compared to its benchmark index. A high Alpha figure illustrates that the fund is able to achieve a higher return than the benchmark due to the fund managers' ability to select good investments and appropriate timing.

Beta: magnitude and direction of the performance of securities in the portfolio relative to the market's return. A Beta lower than 1 denotes that the return of the securities in the portfolio is less sensitive to changes in the market's return. A Beta higher than 1 indicates that the return of the securities in the portfolio deviates by a larger magnitude in comparison to changes in the market's return.

Tracking Error: the fund's ability to replicate the performance of its benchmark index is measured as Tracking Error. A low figure shows that the fund can efficiently match the benchmark's movement and generate similar performance. A fund with a high tracking error will generally have average returns that deviate from the benchmark index.

Tracking Difference (TD): the discrepancy between Fund return and Benchmark return.
