

BCAP USD Short Term Liquidity Fund (BCAP-USL)

Fund Type / Group Fund

- Fixed Income Fund / Feeder Fund / Exposed to Foreign Investment Risk
- Group Fund : Global Bond Discretionary F/X Hedge or Unhedge

Investment Policy and Strategy

- The Fund has a policy to invest in the investment units of an offshore fund named Pictet – Short-Term Money Market USD (the Master Fund), domicile in Luxembourg and under UCITS. The master fund invests in money market instruments, in deposits and in bonds that meet the applicable criteria set in “The Regulation (EU) 2017/1131 on money market funds.” The reference currency of the Master Fund is not necessarily identical to the Fund’s investment currencies (USD). The objective is to provide a return in line with money market rates. The master fund is established by Pictet Asset Management Ltd. and the Fund will invest on average at least 80% of its NAV in each accounting period.
- The Fund will not invest in derivatives. Additionally, the fund will not hedge against the risks associated with foreign exchange rates resulting from investments in foreign markets.
- Investment strategy aims to achieve performance in line with the Master fund. The Master fund is Active Management strategy, the objective is to provide a return in line with money market rates.

Risk Level

Low to Moderate Risk

Investing in government bonds, private sector debentures, with non-investment grade/unrated securities of not exceeding 20% of NAV

GLOSSARY

Maximum Drawdown the fund's largest percentage loss over the past 5 years (or since inception if the fund has been operating for less than 5 years) measured from peak NAV/unit to lowest NAV/unit during a decline. The Maximum Drawdown helps provide some indication of the risk of potential loss when investing in the fund.

Recovering Period the time it takes to regain losses; this data provides information about how long it took to climb back from the largest loss to a former peak.

FX Hedging the percentage of foreign investments that are hedged against foreign exchange risk.

Portfolio Turnover Ratio illustrates how active the portfolio is traded during a particular period. This is calculated by dividing the value of total purchases in 1 year or the value of total sales in 1 year, whichever is lower, by the fund's average NAV over the same period being measured. A fund with a high Portfolio Turnover ratio denotes that its portfolio managers actively trades the securities in the portfolio; this incurs considerable trading costs which should be taken into consideration in comparison with the performance of fund to ascertain whether the active trading activity is well justified.

Yield to Maturity the return from investment in a fixed income instrument that is held until maturity. It is calculated from the stream of coupon payments to receive in the future plus the principal to be paid back, adjusted into present value terms. It indicates the overall return of a fixed income fund by summing the weighted average Yield to Maturity of each fixed income instrument in the portfolio. Since Yield to Maturity is expressed as a percentage per annum, it can be conveniently used to compare fixed income funds which will hold their debt securities until maturity and have similar investment policies.
