Explanation

Maximum Drawdown refers to the maximum percentage of loss of the mutual fund over the past five years (or since inception if the fund has been established less than five years), as measured from NAV per unit from peak to trough when NAV per unit declines. Maximum Drawdown is the information that helps determine the risk of loss from investing in the mutual fund.

Recovering Period refers to the recovering period as information for investors on how long it will take for the fund to recover, measuring from the point of maximum loss to the point of recovery of initial investment.

FX Hedging refers to the percentage of investments denominated in foreign currencies and are hedged against foreign exchange risk.

Portfolio Turnover Ratio refers to the frequency of securities trading in the mutual fund's portfolio over a period. The calculation is based on the lower amount between the total amount of securities purchased and the total amount of securities sold within a one-year period, divided by the average NAV of the mutual fund in the same period. The mutual fund with a high Portfolio Turnover Ratio indicates the higher frequency of securities trading by the fund managers, causing higher cost of securities trading. Therefore, the ratio must be compared with the mutual fund's performance to assess the worthiness of such securities trading.

Sharpe Ratio is the ratio between the mutual fund's marginal return compared with its investment risk, calculated from the difference between the rate of return of the mutual fund and the risk-free rate, in comparison with the mutual fund's standard deviation. The Sharpe Ratio reflects the increase in the rate of return that the mutual fund should receive to compensate the risk received by the mutual fund. A mutual fund with a higher Sharpe Ratio will indicate better investment management efficiency as it has higher returns under the same risk level.

Alpha refers to the excess return of a mutual fund upon comparison with the benchmarks. Having high Alpha means the fund can generate higher returns than the benchmarks, due to the efficiency of the fund managers in selecting or finding an appropriate timing to invest in securities.

Beta refers to the level and direction of changes in the rate of return of securities in the mutual fund's investment portfolio by comparing with market movements. Beta lower than 1 indicates that the change in the rate of return of the securities in the investment portfolio is lower than market movements for that group of securities and vice versa.

Tracking Error indicates the effectiveness of the fund's returns in tracking the benchmarks. If the Tracking Error is low, it means that the mutual fund is efficient in generating returns close to the benchmarks. A mutual fund with high Tracking Error will have the average return deviating more from its benchmarks.

Yield to Maturity refers to the rate of return on investment in debt instruments held until maturity. It is calculated based on the interests to be received in the future throughout the lifespan of the instruments and the principals to be repaid, discounted as the present value. It is used to measure the rate of return of a fixed income fund, calculated from the weighted average of yield to maturity of each debt instrument in which the fund invested. Since the yield to maturity is in percentage per year, it can be used to compare the rates of return between fixed income funds with an investment policy to hold debt instruments until maturity and with similar investment characteristics.

 - (3.2.2.2) Goals and action plans to reduce Thailand's greenhouse gas emissions as per (2).
 - (3.3) Enhanced communication efficiency with investors as specified by the SET.

Investment goals of Mutual Fund

The Fund focus on investing in assets under investment policy which issuer is the government and/or companies registered under Thai laws that running businesses in accordance with sustainable development goals to generate returns through the investment related to sustainability for investors. Being inspired to projects that operate in ESG mindset resulting in sustainable ecosystem for Thailand economy and being one of the mechanisms that support Thailand to achieve sustainable development standard like the sustainable development goals (SDGs) of United Nations.

Investment Universe

The Fund invests in stocks that are listed on the Stock Exchange of Thailand (SET) and/or the Market for Alternative Investment (mai) as follows: 1) Stocks of listed companies that are outstanding on environmental management (E) or ESG and/or 2) Stocks of listed companies that disclose information about greenhouse gas emissions, management plans, and goal setting to reduce the amount of greenhouse gas emissions in Thailand. Including providing for the verification of carbon footprint preparation by verifier accepted by SEC and/or 3) Stocks of listed companies with good governance which has characteristics as per No. (3) "Investment objectives related to Sustainability".

Sustainability Index

The Fund benchmark is SET TRI Index, : Since the Fund aims to invest in stocks of listed companies that consider of E or ESG and/or help reduce the climate change impacts by reducing the amount of greenhouse gas emissions and/or good governance according to the investment policy framework. The index should therefore consist of securities that are in line with the sustainability investment framework, as there is currently no sustainability-related index that covers the fund's investment framework. The SET TRI Index, which consists of all shares of listed companies and is prepared by SET Therefore, it is an appropriate index under the Fund sustainability investment framework. In addition, the companies as a representative of SET TRI Index are companies which have liquidity according to the criteria set by the SET and have sufficient disclosure of information for using in the analysis.
